[2014-9-16_Exide_IMWP_Final_Public_Mailout.pdf](#)

FYI - DTSC is moving forward with their own workplan to cleanup the remaining 37 homes that are above 80ppm. Apparently they were not able to reach agreement with Exide on doing the work. I just checked and don't think the workplan is posted yet but I would like you to review when it is.

Thanks

Subject: draft Interim Measure Workplan Public Notice for Exide

Kathleen/ Barbara:

This is a followup to my voice message or our conversation today. DTSC will have a public comment period on the draft Interim Measure Workplan starting tomorrow and ending on October 20, 2014. This is for remediation of soils with elevated lead levels at residences. In the workplan the details of the criteria are provided. Overall this follows the actions taken at the two homes – access agreement, pre meeting with owners, landscape inventories, relocation, per diem, water usage, excavation, soil characterization, air sampling and restoration of yards

Attached are the public outreach documents. The attached are being mailed to some 2700 addresses. The public notices will be published in the LA times and La Opinion newspapers

The Interim Measures Workplan as well as the CEQA associated documents will be available on our website tomorrow -
